

McScM - Bug # 17: Packaging problems when compiling pure bytecode version

Status:	Closed	Priority:	Normal
Author:	Alexander Heußner	Category:	
Created:	06/05/2010	Assignee:	Grégoire Sutre
Updated:	04/08/2011	Due date:	
Subject:	Packaging problems when compiling pure bytecode version		
Description:	<p>Compiling the code with the bytecode compiler only (or with camlcp) revealed an error in the build process.</p> <p>Both @Util.cmo@ and @Svar.cmo@ are not built correctly by our built process (this does not appear if be built it at the same time with the native code, as the native code (built after the bytecode) repairs/hides these flaws).</p> <p>I guess that we need to take a closer look at the makefile...</p>
