

McScM - Bug # 75: Compiling McScM under OCaml 4.00

Status:	Closed	Priority:	Normal
Author:	Alexander Heußner	Category:	
Created:	08/23/2012	Assignee:	Alexander Heußner
Updated:	08/27/2012	Due date:	
Subject:	Compiling McScM under OCaml 4.00		
Description:	<p>Compiling the source via the @Makefile@ with OCaml 4.00 not possible due to inconsistencies with ocamlbuild's treatment of the @-build-dir@ parameter. ocamlbuild declare's our custom build directory as not hygienic and stops the compilation directly in the beginning.</p> <p>This is a known bug in OCaml 4.00.0 (see http://caml.inria.fr/mantis/view.php?id=4502).</p> <p>Workaround: explicitly tag our non-standard build directory as "not hygienic" in the @_tags@ file (see following patch).</p> <pre><pre>@@ -16,3 +16,6 @@
